PROFESSIONAL SUMMARY

Systems Engineering student (8th Semester) specialized in Data Engineering and Business Intelligence. I bridge the gap between backend development (Python, SQL) and business strategy. Expert in building automated ETL pipelines, cleaning complex datasets, and designing dashboards that drive decision-making. Proven track record of reducing manual reporting time by 90% through Python automation.

TECHNICAL SKILLS

Data Engineering & ETL: Python (Pandas, NumPy), SQL (PostgreSQL, SQLite), Data Cleaning, Automation.

Business Intelligence: Power BI (DAX, Star Schema), Tableau, Data Visualization, Reporting.

Infrastructure & Tools: Git/GitHub, Linux (Bash Scripting), VS Code, Docker (Basics).

Languages: Spanish (Native), English (B2/C1 - Professional Proficiency).

KEY PROJECTS

Automated E-commerce ETL Pipeline | *Python, Pandas, SQLite, SQL*

Designed an end-to-end ETL pipeline to ingest raw sales data containing intentional errors (nulls, outliers).

Implemented Pandas scripts to clean and validate 500+ transaction records, automatically filtering corrupt data.

Engineered a persistent storage solution using SQLite to ensure data integrity for historical analysis.

Automated the generation of a revenue dashboard to identify top-performing regions.

[\[View Project & Code on Portfolio\]](#)

Credit Risk Strategic Dashboard | *Power BI, DAX, SQL*

Developed a risk assessment model analyzing 1,000+ loan applicants to identify default patterns.

Designed a Star Schema data model in Power BI to optimize query performance and reporting speed.

Uncovered that loans for Electronics and Cars had a 30% higher default rate than average.

PROFESSIONAL EXPERIENCE

Python Automation Developer (Freelance Consultant)

Remote

Developing B2B automation solutions to streamline data reporting and ETL workflows.

Reduced client reporting time from 10 hours to under 60 seconds by creating custom Python scripts.

Implemented Web Scraping bots for competitor price monitoring and market analysis.

Technical Support Analyst - Tier 2

Local Company

Performed advanced diagnostics using SQL queries to verify data integrity in production environments.

Automated server maintenance tasks using Bash scripting on Linux systems.

Managed critical incidents under strict SLAs, maintaining a 99% resolution rate.

Jun 2024 – Present

Global

Jan 2023 – May 2024

Cochabamba, Bolivia

EDUCATION

Universidad Privada Domingo Savio (UPDS)

B.S. in Systems Engineering (8th Semester)

Relevant Coursework: Database Management, Advanced Algorithms, Operating Systems.

Expected Graduation: 2026

Cochabamba, Bolivia

CERTIFICATIONS

Python for Data Science - IBM Developer Skills Network

SQL Advanced for Data Analysis - LinkedIn Learning

CCNA (Cisco Certified Network Associate) - Networking Basics
